

Multi-Temperature Solution™

Frozen Module Training

Why This Training?

As AutoStore expands its solution offering to include the Multi-Temperature Solution (MTS), it's essential that our partners are fully equipped to deliver it correctly.

The MTS, including the AutoStore Frozen Module, is part of the AutoStore solution, enabling consistent temperature-controlled Grids across chilled and frozen environments. This training ensures HVAC Installers are certified to implement the Frozen Module according to AutoStore standards, maintaining quality and performance for our customers.

How to Sign Up?

Contact AutoStore at MTS@autostoresystem.com to learn more.

Our Program

Who Is This For?

HVAC installers who will integrate and install the MTS Frozen Module and AutoStore Partners who supervise the process.

What Do You Get?

Completion of the AutoStore HVAC certification enables you to become part of a qualified network authorized to implement the Frozen Module. You gain:

- In-depth technical knowledge and experience
- Certification aligned with AutoStore standards
- Access to relevant AutoStore documentation
- Eligibility to deliver installation services for the AutoStore Multi-Temperature Solution

Certification Pathway

AutoStore offers a brief, remote Specification Seminar upon request to introduce the Multi-Temperature Solution (MTS) Frozen Module to new HVAC companies.

To become a Certified AutoStore HVAC Installer, completion of both a legal installer agreement and a two-day, in-person training course is required. The elements below outline the components of the certification pathway.

Specification Seminar (optional)

Before becoming a certified HVAC Installer, AutoStore offers an MTS Specification Seminar designed to help new HVAC companies prepare Rough Order of Magnitude (ROM) pricing quotes. The one-hour seminar is conducted remotely and can be scheduled upon request by contacting us at MTS@autostoresystem.com.

HVAC Installer Agreement

An agreement between AutoStore and the HVAC installer is also required to complete the certification process. It provides IP permissions to the HVAC Installer, defines rights and responsibilities, and enables the installer to offer MTS Frozen installation services as an approved AutoStore HVAC Installer by being certified.

Training Course

When ready to move further and become certified, a two-day training session at our Innovation Hub in Norway is required. This will provide essential knowledge about the design, construction, and operation of our MTS Frozen module. It covers the selection of off-the-shelf HVAC equipment, the approach of air balancing, and the application of AutoStore components.

HVAC Certification

The AutoStore HVAC Installer Certification ensures that installers are properly trained and qualified to perform HVAC installations for AutoStore's MTS Frozen Module. With the certification, HVAC installers are listed in AutoStore's Partner Portal as a certified company, for customers purchasing MTS Frozen modules.
